Risk Disclosure

1. In the worst case scenario, the value of the funds may be worth substantially less than the original amount you invested (and in an extreme case could be worth nothing).
2. Funds which are invested in certain markets and companies (e.g. emerging, commodity markets and smaller companies etc) may also involve a higher degree of risk and are usually more sensitive to price movements.
3. Credit Risk/Interest Rate Risk – a fund that invests in fixed income securities may fall in value if interest rates change, and is subject to the credit risk that issuers may not make payments on such securities. Price of the fund may have a high volatility due to investment in financial derivative instruments and may involve a greater degree of risk than in the case with conventional securities.
4. Counterparty Risk – a fund will be exposed to credit risk on the counterparties with which it trades in relation to financial derivative instrument contracts that are not traded on a recognised exchange. Such instruments are not afforded the same protections as may apply to participants trading financial derivative instruments on organised exchanges, such as the performance guarantee of an exchange clearing house. A fund will be subject to the possibility of insolvency, bankruptcy or default of a counter party with which a fund trades such instruments, which could result in substantial loss to a fund.
